परीक्षा सबकी, तैयारी पक्की · sarvpariksha.in

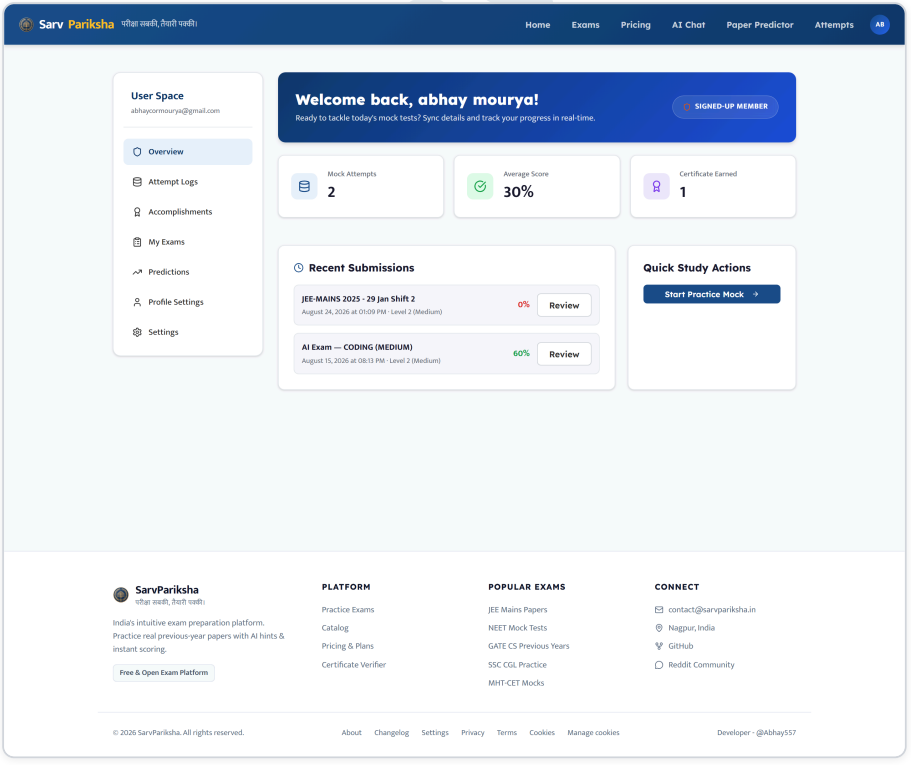

User Guide — Logged-in Students

Your synced history, verifiable certificates, AI exam generator, doubt chat, paper predictor and all four teacher-exam portals — everything a free account unlocks.

abhay557

1. Your account at a glance

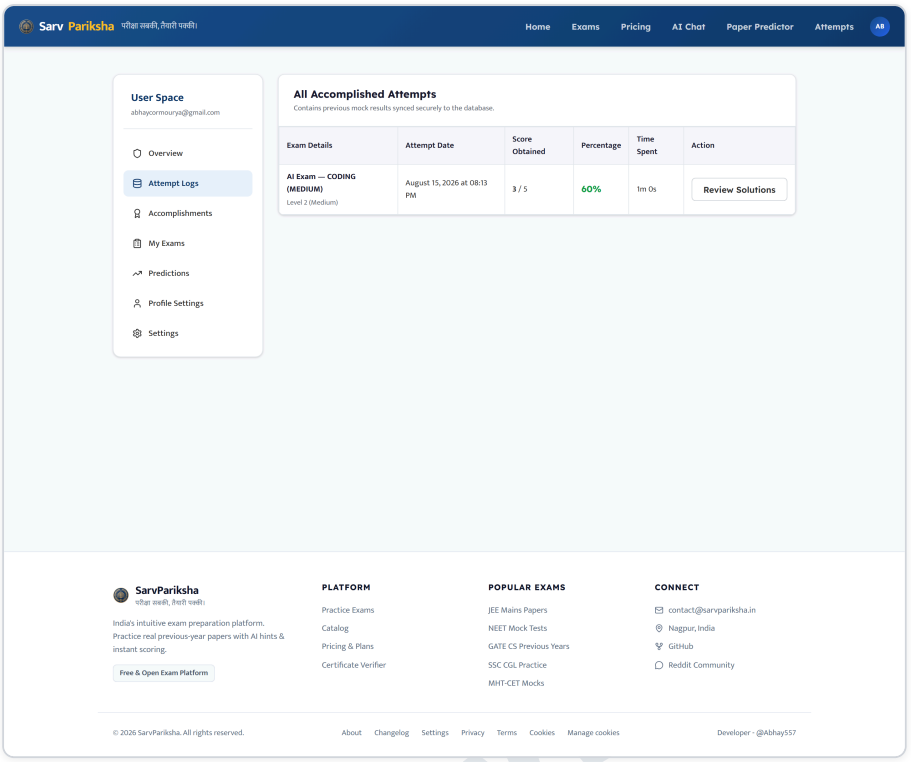

Capability	Guest	Free account
Take all mock / NTA / AI exams	✓	✓
Attempt history synced to cloud	browser only	✓ any device
Verifiable certificates (AI exams ≥ 40%)	—	✓ with QR + serial ID
AI Chat	✗ (sign-in required)	✓ 100 hints/day + image OCR
AI Paper Predictor	✗	1 prediction/day
Take a teacher's shared exam	Game Mode + Buzz only	✓ all four portals
Teacher exam toolkit	—	3 exams/day (see Teacher Guide)
Game Mode & Daily Challenge leaderboard	✗	✓
Mistake Notebook + AI study plan	browser attempts only	✓ synced from all attempts
Result extras: AI analysis, heatmap, percentile, share cards	—	✓

Dashboard — your exam command center

2. Attempt Logs — every paper you've taken

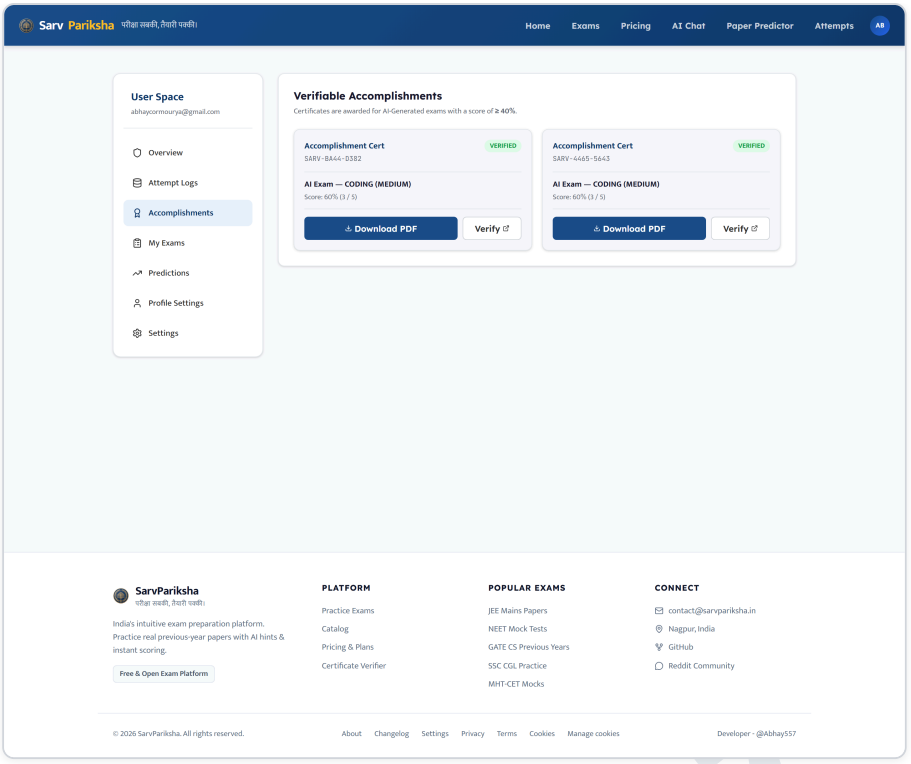

Each attempt (score, percentage, time, date) is saved to your account. Open any record to re-view the full solution sheet, or compare across papers to see trends.

Attempt Logs — filterable, reviewable history

3. Accomplishments — verifiable certificates

Score **≥ 40% on an AI-generated exam** and a certificate unlocks: serial ID (`SARV-XXXX-XXXX`), QR code, downloadable PDF. Anyone can verify it at **sarvpariksha.in/verify**. Certificates are intentionally limited to AI exams — they prove performance on questions no one has seen before.

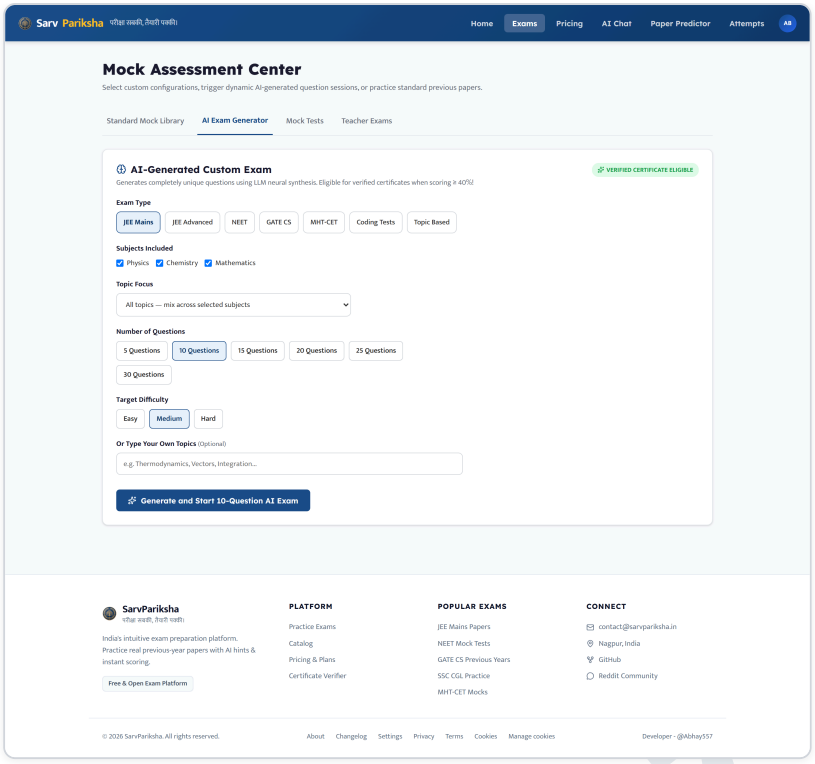

Accomplishments — earned certificates with verify + download

4. AI Exam Generator — unlimited challenge

1. Open **Exams** → **AI Exam Generator**.
2. Pick exam type (JEE/NEET/GATE/Coding/Topic-Based), subjects, optional topic focus, question count and difficulty.
3. Press **Generate and Start** — a brand-new paper is written for you in seconds and opens directly in the CBT engine.

> Use **Topic Based** when you know your weak area — e.g. "Rotational Motion, hard, 10 questions" is a 5-minute targeted drill. Or pick the new **Adaptive** difficulty: the paper starts easy and gets progressively harder as you advance, just like a real exam ladder.

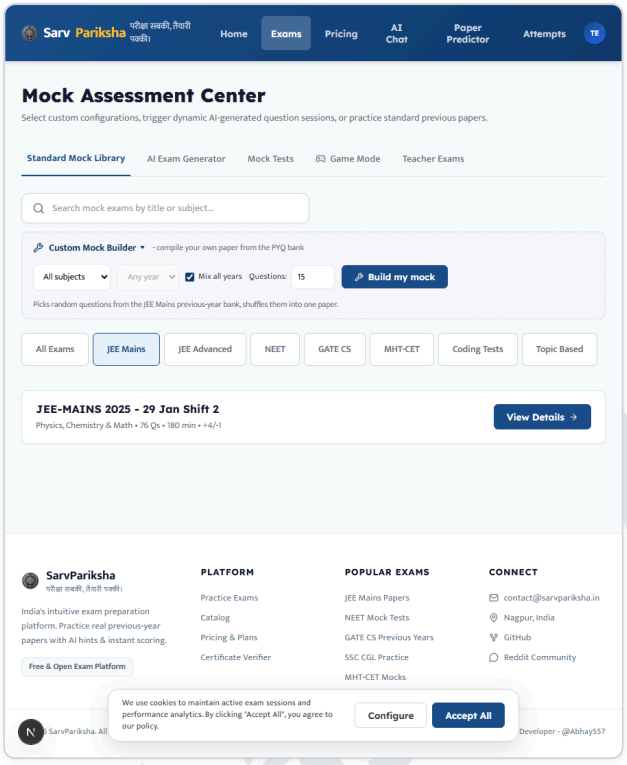

Configure exactly the challenge you want

abhay557

5. Custom Mock Builder — compile your own paper

Inside **Exams** → **Standard Mock Library**, open **Custom Mock Builder**: pick a subject, a year (or mix all years) and how many questions you want. It shuffles a fresh paper from the previous-year bank — every compile is a new mock, so you can build unlimited variants of the same syllabus without repeating questions.

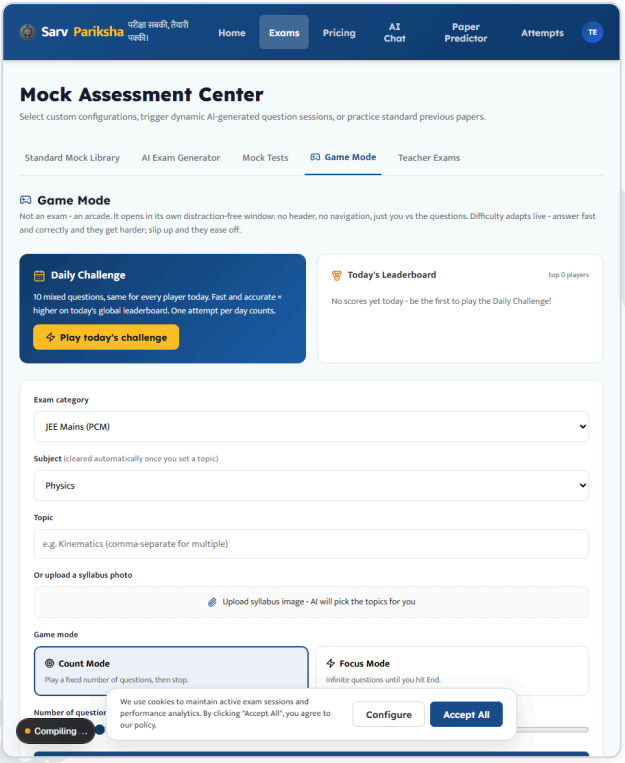

Custom Mock Builder — subject, year and count filters

6. Game Mode — the adaptive arcade

Exams → **Game Mode** is not an exam — it's a quiz arcade that opens in its own distraction-free window: no site header, no navigation, nothing to click around. Difficulty adapts live to your performance: answer correctly and quickly and questions get harder; slip up and they ease off.

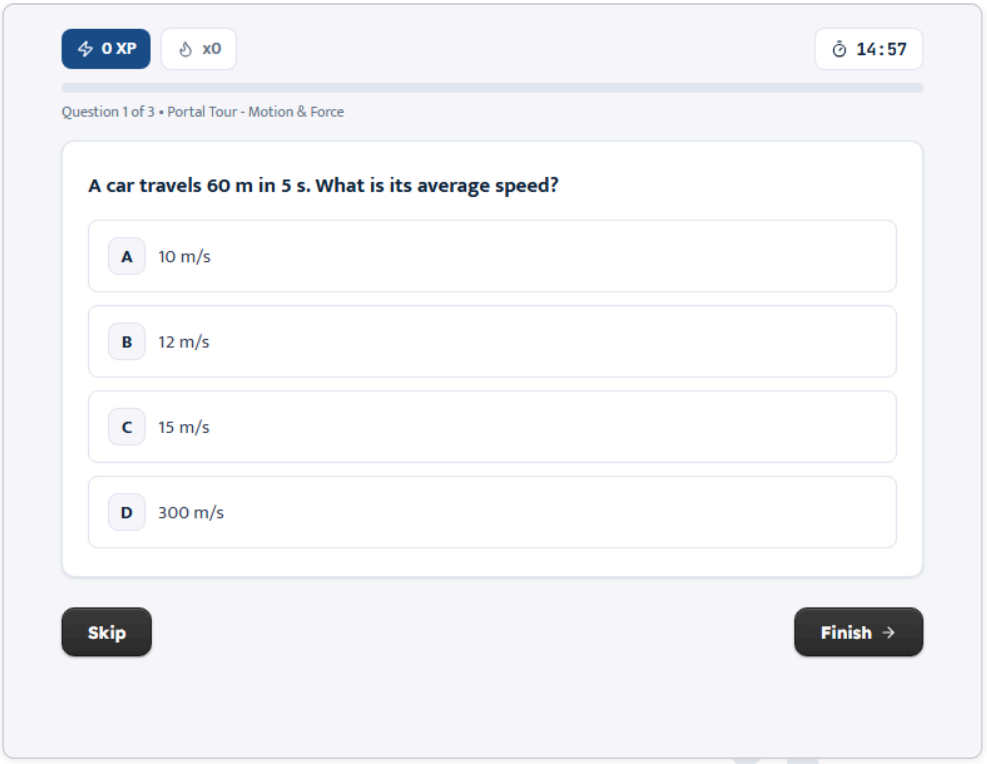

- **Pick your battlefield** — choose a subject, type any topics (comma-separated), or upload a photo of your syllabus and AI extracts the topics for you automatically.
- **Count Mode** — a fixed number of questions, then the game ends on its own.
- **Focus Mode** — infinite questions until you press **End Game**. Perfect for deep practice sessions.

Game Mode setup — Daily Challenge card, global leaderboard and game configuration

Daily Challenge & the global leaderboard

Once a day there's a **Daily Challenge**: 10 mixed questions, the same for every player that day, played for the global leaderboard. Score high and fast to climb — medals mark the top 3, and everyone sees where they stand. One attempt per day counts, so make it count.

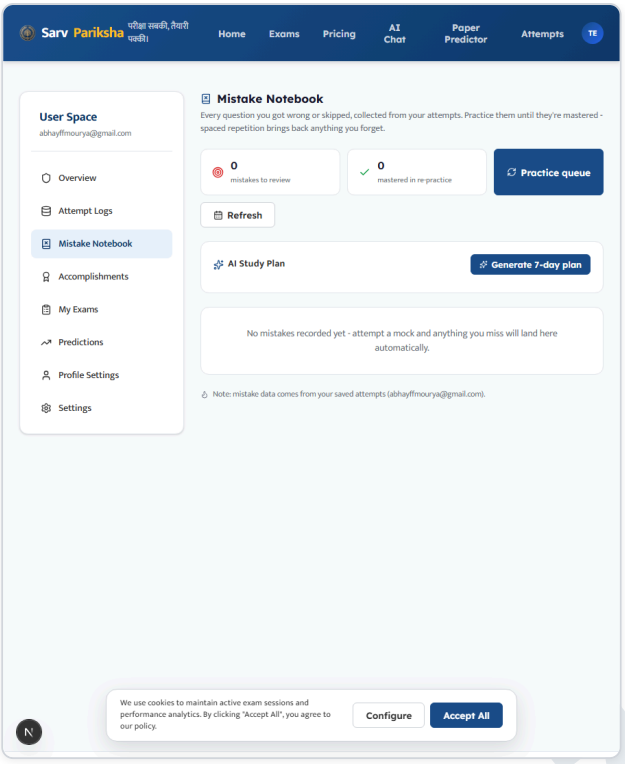

The isolated Game Mode arena — HUD with score, streak, live difficulty badge and instant feedback

7. Mistake Notebook — where wrongs go to get right

Every question you answer wrong or skip is collected automatically into the **Mistake Notebook** (Dashboard → Mistake Notebook). Nothing to set up — attempt any exam and your misses land here, tagged by topic and how many times you've missed them.

- **Re-practice queue with spaced repetition** — work through your mistakes one by one. Answer one correctly and it leaves the queue… but it returns if you miss it again in a future exam. Mistakes can't hide.
- **AI Study Plan** — one tap turns your weak topics into a 7-day revision plan: what to study each day, when to mix in a mock, and what to keep revising.
- **Mastered list** — questions you've fixed in re-practice get a green tick; reset anytime.

Mistake Notebook — due mistakes, weak-topic chips, AI study plan and the re-practice queue

8. Smarter results — analysis beyond the score

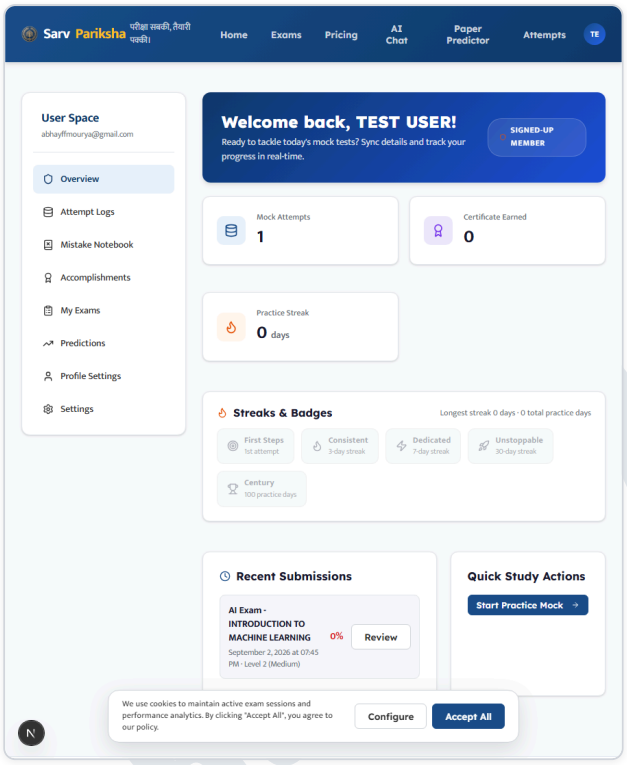

Submitting an exam now gives you far more than a scorecard (sign-in required for the analysis extras):

- **AI Performance Analysis** — a coach-style verdict: why you lost marks, a time-management note, and this week's revision plan, generated from your actual answers.
- **Explain with AI** — tap any question in the solutions for a deep step-by-step explanation, including exactly where your picked option went wrong.
- **Time-per-question heatmap** — every question shows how long you spent on it (green = fast, red = slow), so you can see exactly which questions ate your clock.
- **Estimated percentile** — an indicative percentile based on typical competitive-exam score curves.
- **Shareable result card** — a clean image summary of your attempt (score, percentile, exam) ready for WhatsApp/Instagram.

abhay557

9. Streaks & badges

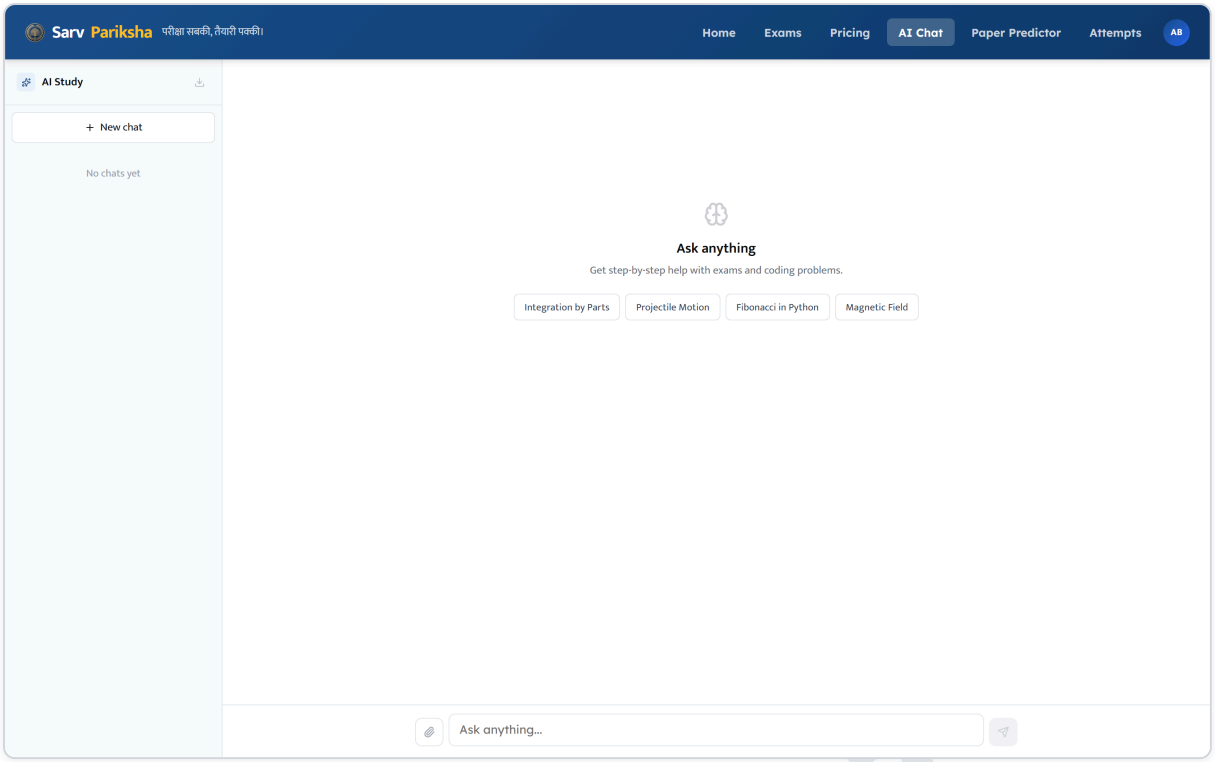

Practice daily to build your **streak** — shown right on the dashboard overview — and unlock badges along the way: First Steps (first attempt), Consistent (3-day streak), Dedicated (7 days), Unstoppable (30 days) and Century (100 practice days). Streaks count any attempt or game run; missing a day resets the counter, so consistency is the game.

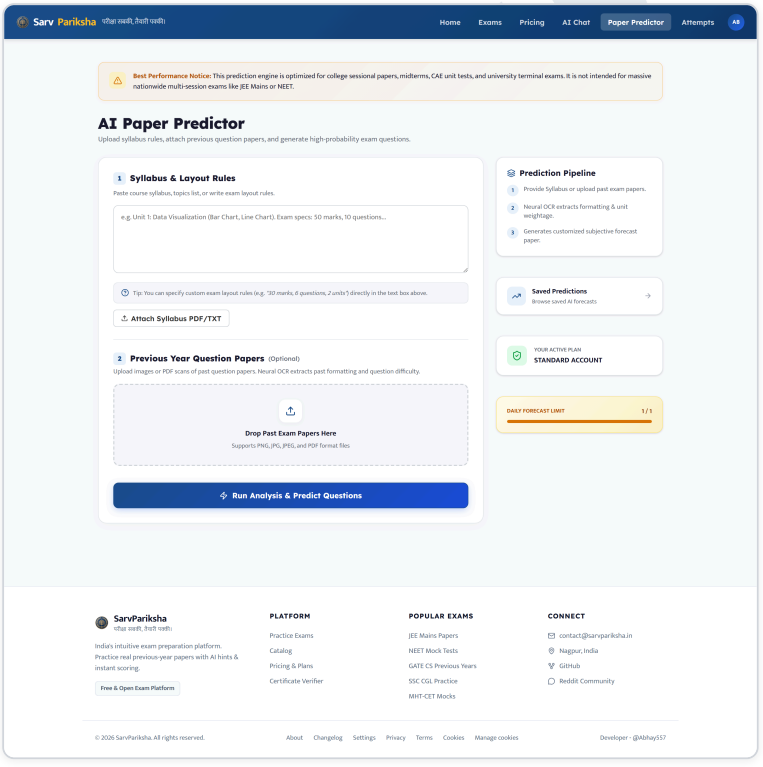

Dashboard overview — practice streak card plus the badge strip

10. AI Chat & Paper Predictor

AI Chat answers doubts with step-by-step explanations and can read images of questions (OCR). **Paper Predictor** analyses your syllabus plus uploaded previous papers and forecasts a likely question paper for your exam.

AI Chat — step-by-step doubt solving with image OCR

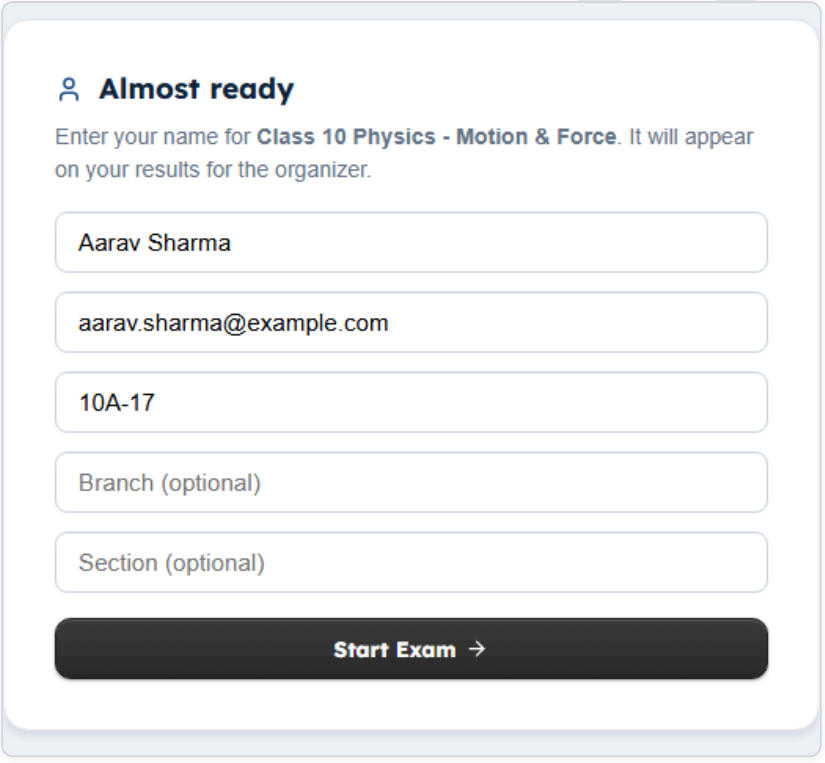

Paper Predictor — upload past papers, get a forecast

11. Taking a teacher's exam — four portals

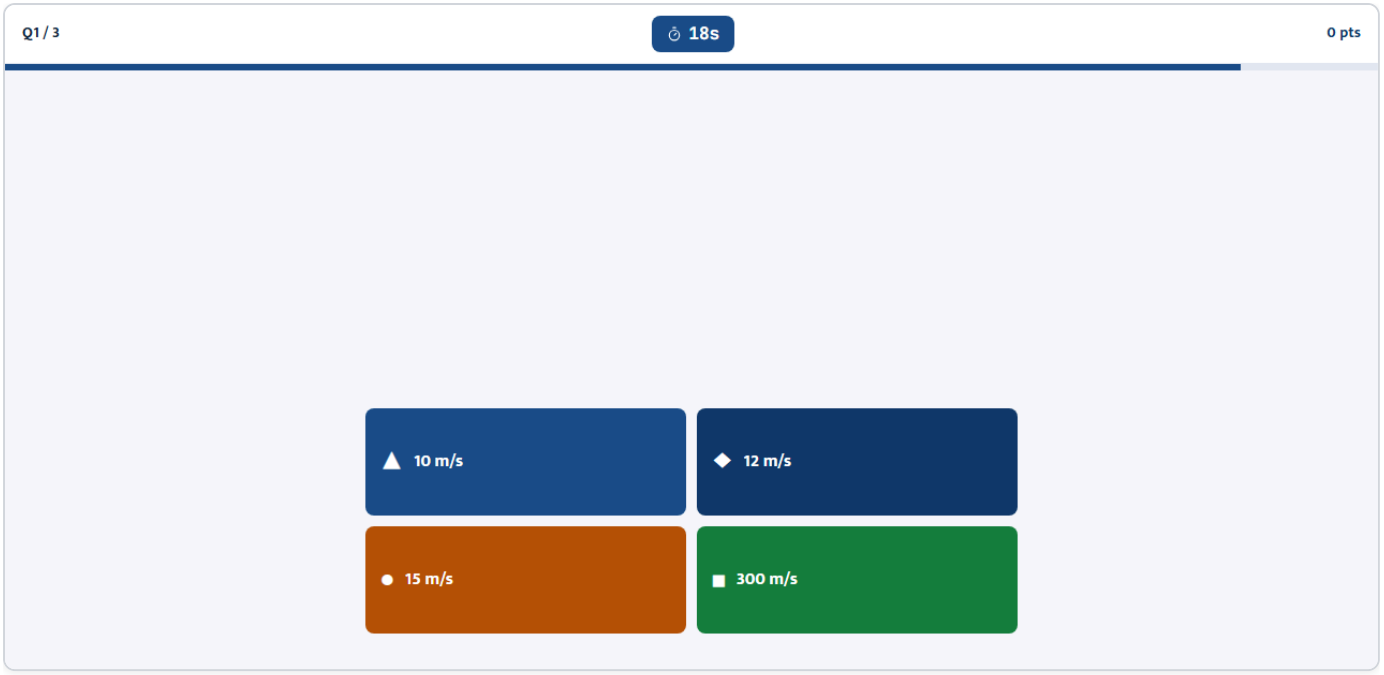

When a teacher/organizer shares a link (`sarvpariksha.in/take/TE-XXXXXX`), open it, enter the access code if asked, and type your name. The organizer has already chosen the student portal on Step 1 of the exam builder — you do not choose it yourself.

Portal	How you take it	What to expect
Official NTA	Link → code/name → instructions → declaration → timed CBT.	Hall replica with sections, palette, review and timer. Sign-in required to start.
Our Engine	Link → code/name → instructions → declaration → player.	Cleaner player with palette and optional AI hints. Sign-in required to start.
Game Mode	Link → code/name → Play Game Mode.	One question at a time with XP, streaks and instant feedback. No palette.
Buzz Mode	Join with the teacher's 6-digit room PIN and a display name.	Live room. The question is on the projector; your phone shows four colour buttons and a countdown.

The shared-exam entry form: your name is required; email, roll number, branch and section are optional

> **Buzz Mode is a two-screen experience.** Your phone is the buzzer, not the question paper. Read the question from the teacher's projected host screen, then tap the colour that matches your answer before the countdown ends. Faster correct answers earn more points; the live podium is for the room, while your final marked attempt is still graded on the server.

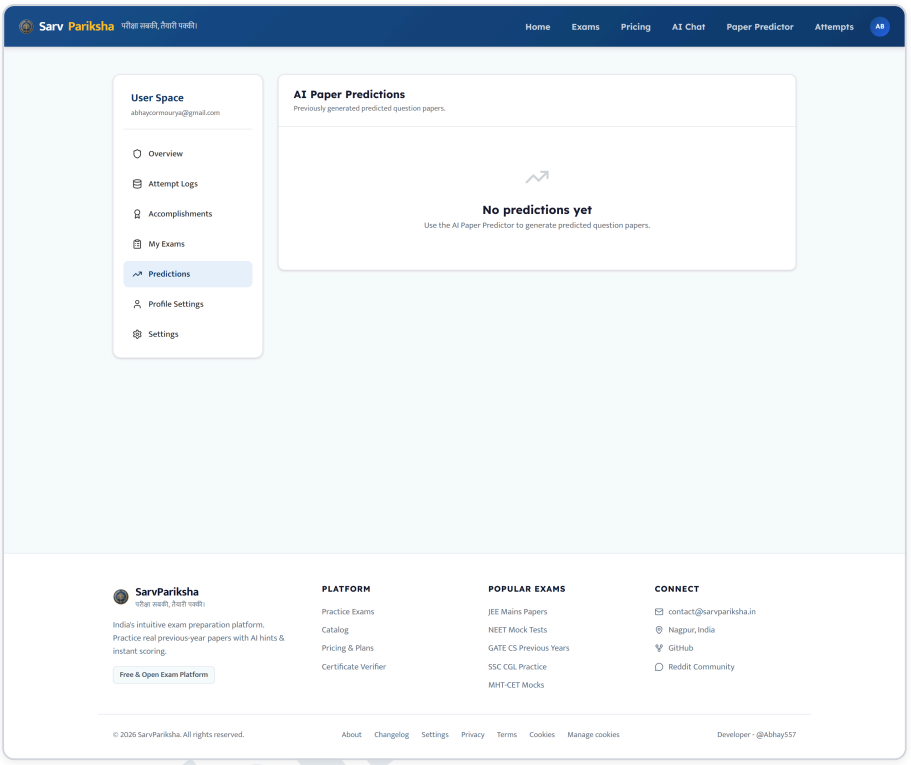

Buzz Mode on a phone — four colour targets, the question countdown and your current points. The question stem is deliberately kept on the host screen

Heads-up: the organizer controls AI hints per exam. If they turned hints off, the hint panel is completely hidden for that exam — don't look for it, it's intentional. Certificate downloads need a signed-in account, even when the public exam link itself opens for a guest.

Your result is portable. The organizer receives your server-computed score in My Exams → Analytics, and you receive a **verified-result link** (`sarvpariksha.in/r/ATT-…`) you can attach anywhere. It shows the verified score without exposing your email or the question content.

12. Profile & data controls

- **Profile Settings** — name, avatar, password.
- **Settings → AI Hints** — turn hint panel on/off globally.
- **Settings → Export My Data** — download everything (attempts, certificates, chats, predictions) as JSON.
- **Settings → Delete Account** — permanently removes all cloud data.

Saved paper predictions live in your dashboard

> **Exam-day tip:** practise with *Start Timed Simulation* at least once per subject before the real thing — the palette, section switching and declaration flow are modelled on the actual NTA CBT so there are no surprises.
