SarvPariksha

परीक्षा सबकी, तैयारी पक्की।

TEACHER PLAYBOOK · LIVE TEST EDITION

My Exams.

Build a paper, choose one of four student rooms, share one link, and turn every attempt into a teaching decision.

CREATE SHARE TEST ANALYSE

WHAT THIS GUIDE IS

Set up
A real exam, with real rules

Live test
Three student attempts

Analyse
Class and question-level insight

October 2026
Based on a live run of the app. Test data was removed after capture.

START HERE

A real test run, not a feature list.

This guide follows one exam from a blank **Create Exam** form to three student attempts and a question-level reteach plan. Every screenshot is from the live app. The student names are test identities, and the main exam plus the portal-tour copy were deleted after capture.

3	58.3%	67%	33%
student attempts	class average	pass rate (40%+)	weakest question

What is inside

01	Control room	p. 3
02	Set the rules	p. 4
03	Add questions	p. 5

07	Our Engine & Game Mode	p. 9
08	Buzz Mode	p. 10
09	Live results	p. 11
10	Class analytics	p. 12
11	Question analytics	p. 13
12	Operate & troubleshoot	p. 14

LIVE TEST FINDING

Students need a free account to start a teacher exam. A guest can open the link and read the paper, but the timed Start button opens the sign-in flow. Ask students to sign in once before the exam — Google is the fastest route.

HOW TO READ THE SCREENSHOTS

The screenshots show the app at a desktop width. The exam engine is best on a laptop or desktop, especially in Official NTA mode where the question palette needs space.

ONE DELIBERATE LIMITATION

The live test used three attempts and three questions. Use the percentages in this guide as a smoke test of the workflow, not as a statistically meaningful class report. The same analytics become much more useful with a full class.

Test window: 21 October 2026 · Exam: Class 10 Physics - Motion & Force · 3 MCQs · 15 minutes · +4 / -1 · Public link · Official NTA · AI hints off · Certificates on · Reattempts allowed.
Portal screens: a second temporary exam, “Portal Tour - Motion & Force”, used only for Our Engine, Game Mode and Buzz Mode; deleted after capture.

01 · ACCESS

My Exams is your control room.

Sign in with a teacher account, open **Dashboard**, then choose **My Exams**. The section lives inside the dashboard; there is no separate public `/myexam` page in the current build. If the tab is missing, the account is not a teacher (affiliate) account.

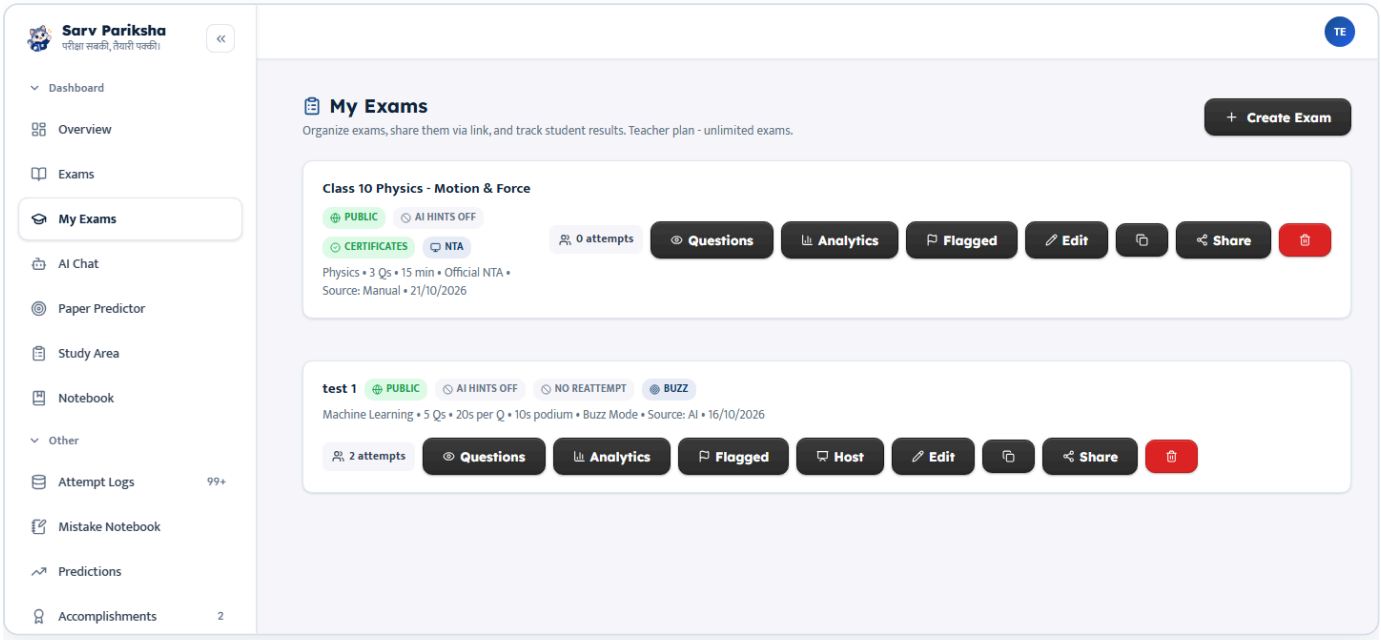

FIGURE 01 The My Exams list after publishing: status chips, paper details and every management action in one place.

Read a card in one glance

Public · AI hints off · Certificates · NTA · 3 attempts

- **Status chips** — visibility, hints, certificates, portal type.
- **Paper line** — subject, question count, duration, source.
- **Attempt count** — how many students have submitted.
- **Actions** — Questions, Analytics, Flagged, Host, Edit, Duplicate, Share, Delete.

TEACHER ACCOUNT CHECK

If you cannot see My Exams: your account may be a free student account or a paid student plan. Teacher access is free, but it is a separate account tier. Contact the SarvPariksha team to enable teacher access on your email.

Paid non-teacher accounts can see the tab, but the management surface shows an upsell instead of the builder.

STABLE LINKS

Editing an exam does not change its share link. Students can keep the same link while you fix a question, adjust marks or change the availability window.

02 · BUILD · STEP 1 OF 3

Set the rules first.

The first step is not the question paper — it is the contract with the student. Decide how long they have, how the paper is marked, who can open it, and what help they get before you type a single question.

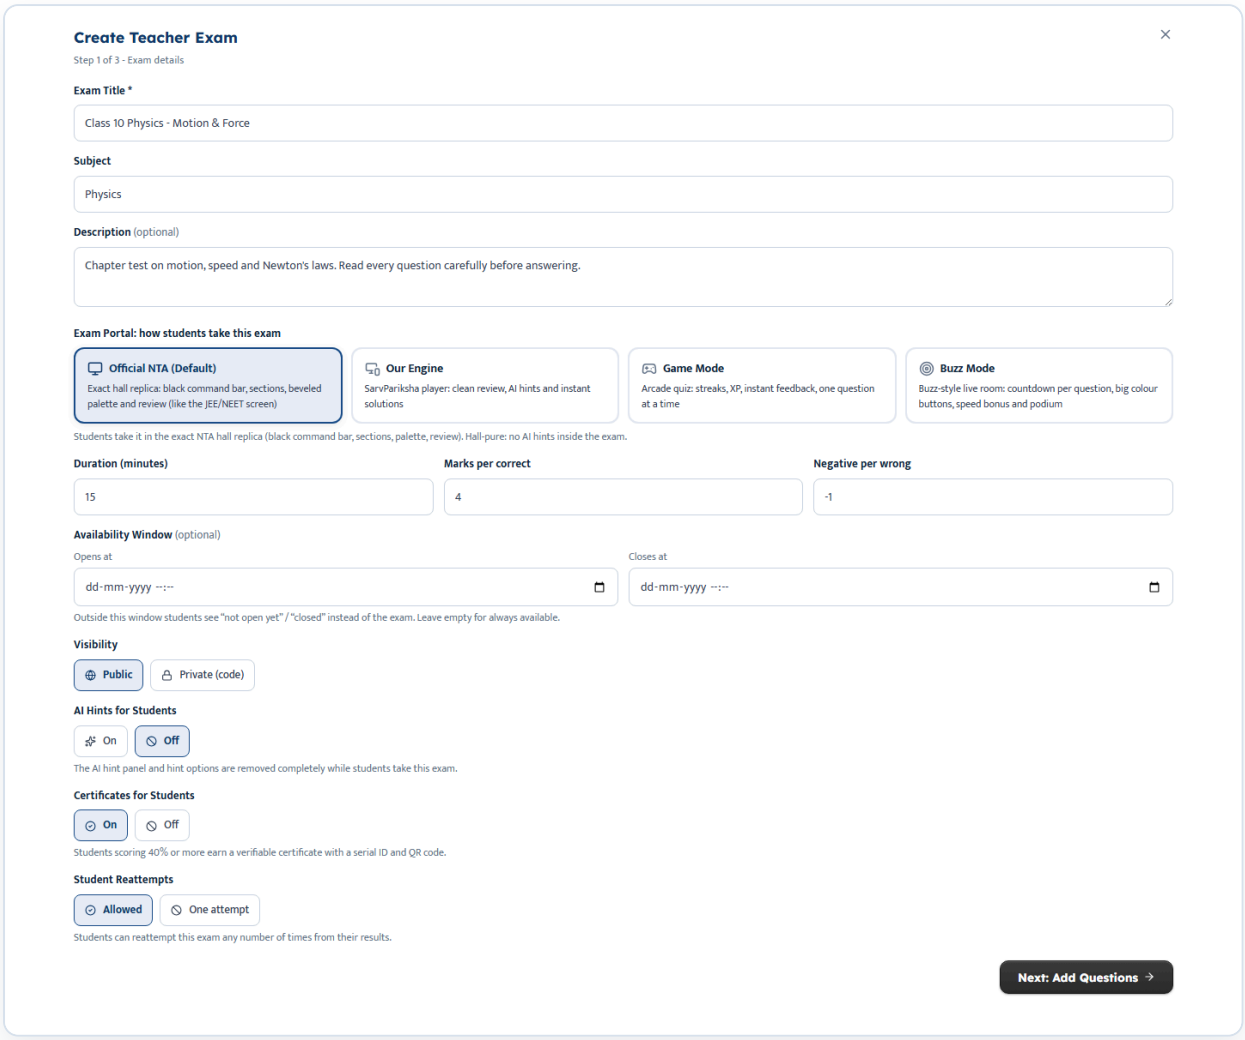

FIGURE 02 Step 1, completed for the live test: 15 minutes, +4/−1, public, AI hints off, certificates on, reattempts allowed.

The four portals

PORTAL	BEST FOR
Official NTA	Hall-pure practice: black command bar, palette, review, no AI hints inside.
Our Engine	Clean practice with AI hints, instant solutions and a simpler player.
Game Mode	Arcade quiz: one question at a time, streaks, XP, instant feedback.
Buzz Mode	Live room: countdown per question, colour buttons, speed bonus, podium.

Settings that change the experience

- **Duration** — the timer auto-submits at zero.
- **Marking** — correct and negative marks are applied per question.
- **Window** — outside the dates, students see “not open yet” or “closed”.
- **Private code** — the link asks for a code; send it separately.
- **AI hints** — off for hall-pure; on for supported practice.
- **Certificates** — 40%+ can earn a verifiable certificate.
- **Reattempts** — allowed, or one attempt only.

03 · BUILD · STEP 2 OF 3

Add questions your way.

Use the source that matches the paper in front of you. Every route ends in the same editable list, so you can review and fix wording before publishing.

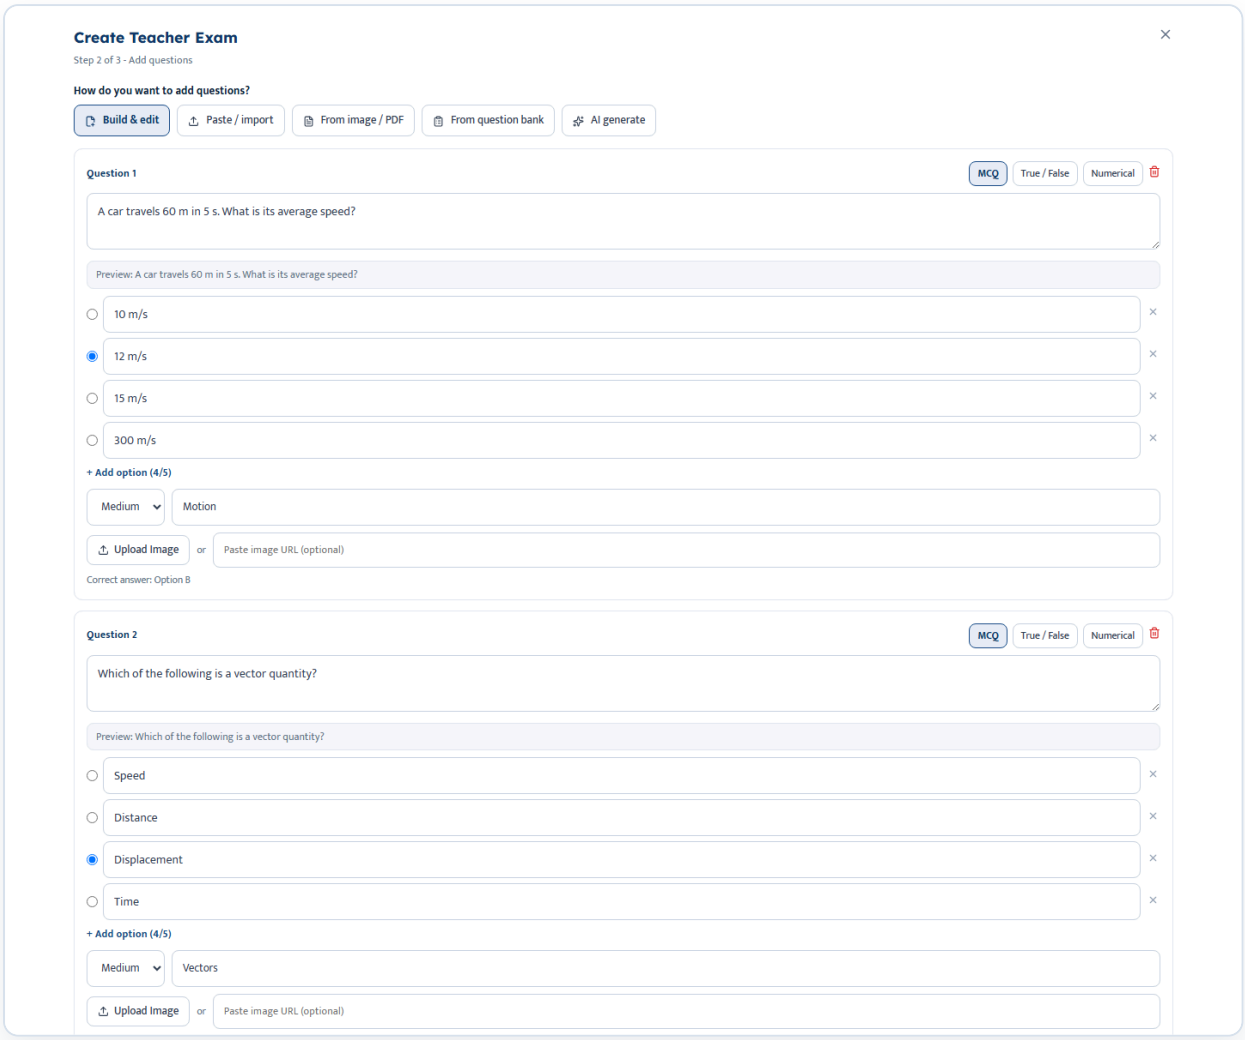

FIGURE 03 The manual builder with the first two live-test questions. Each question keeps its own correct-answer radio, difficulty and topic.

Five ways in

Build & edit	Type questions one by one. MCQ, True/False or Numerical.
Paste / import	CSV, TSV or pasted Excel rows. One row per question.
Image / PDF	OCR a printed paper or extract text from a digital PDF; review every draft.
Question bank	Pull existing questions into the paper.
AI generate	Draft questions from a topic or syllabus; always review before publishing.

Bulk import format

```
Question, Option A, Option B, Option C, Option D,
Answer, Difficulty, Topic
A car travels 60 m in 5 s. What is its average
speed?, 10 m/s, 12 m/s, 15 m/s, 300 m/s, B, easy,
Motion
Value of pi up to 2 decimals, , , , , 3.14, easy,
Numbers
```

Answer accepts A–D, 1–4, the exact option text, or a raw number. Use True/False options for true-false; leave options empty and put a number in Answer for numerical.

Keep topic labels consistent. Per-question analytics groups by topic; use “Laws of Motion” everywhere, not “laws” or “LOM”.

04 · BUILD · STEP 3 OF 3

Review, then publish.

The review screen is the last quiet moment before students see the paper. Check the rules and the answer key here — not in the analytics after the test.

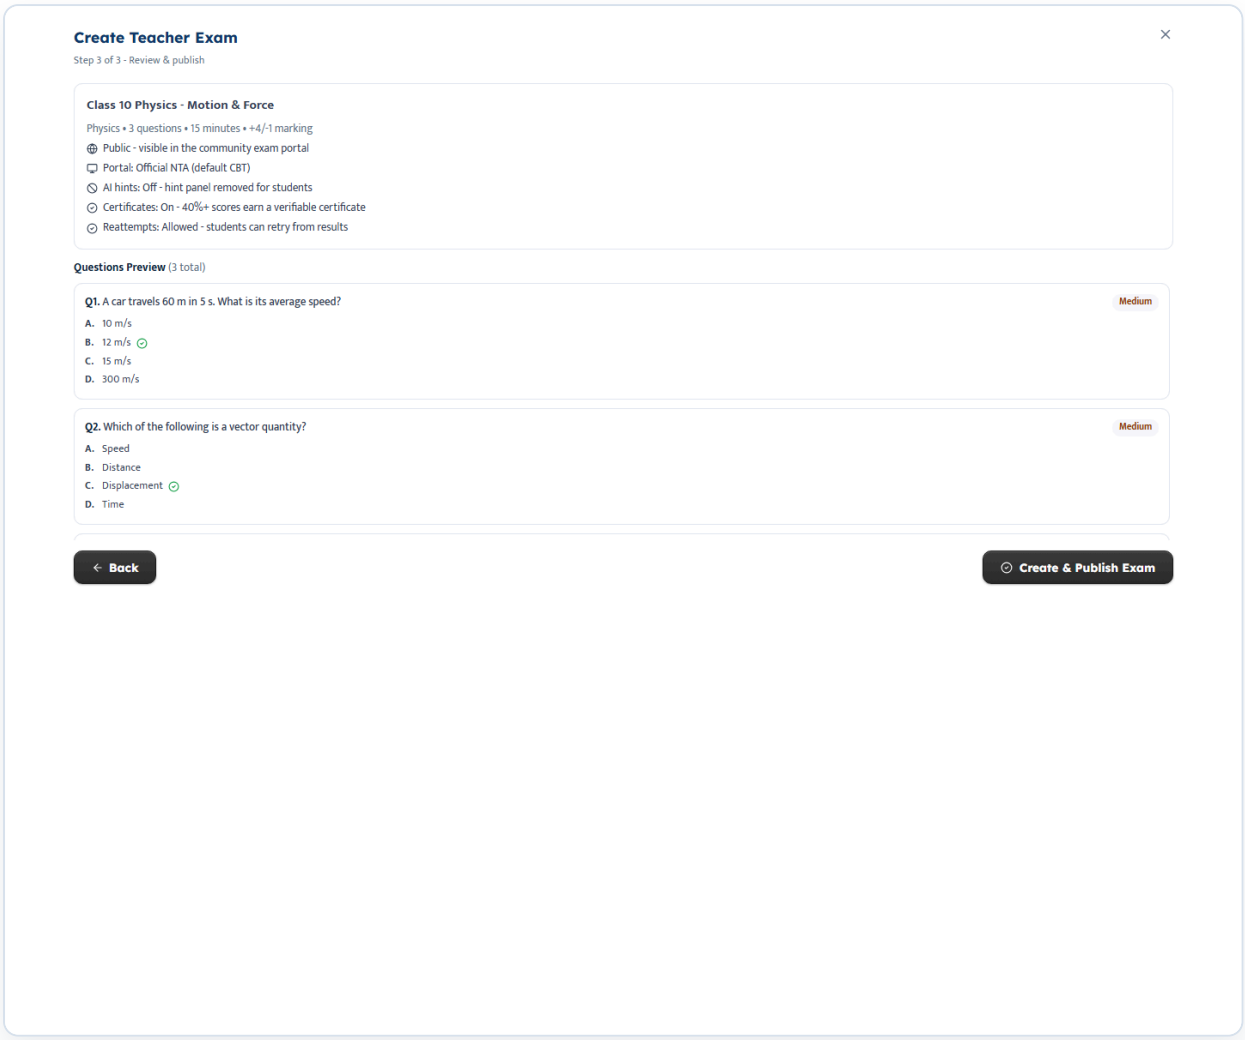

FIGURE 04 The review screen: title, rules, visibility, hints, certificates, reattempts and the question preview with the correct option marked.

Publish checklist

- [ ] Every question has one correct option.
- [ ] Duration and marking match the paper.
- [ ] Title and instructions are clear to a student.
- [ ] Public or private is intentional.
- [ ] AI hints match the practice goal.
- [ ] Certificates and reattempts are intentional.

A SAFE TEST HABIT

Duplicate a finished exam for a live test. Run the copy with one or two dummy students, inspect analytics, then delete the test copy. Your original paper keeps its link and its clean attempt history.

Publishing creates the share link immediately. The exam remains editable; the link stays stable.

WHAT THE COUNTER MEANS

The review header shows the total question count. If you expected 20 and see 19, scroll the list before publishing — the missing question is usually below the fold.

05 · SHARE

One link. Clear expectations.

Open **Share** on the exam card. Copy the student link, or share the private code separately. Then open the link yourself before class and walk the student path once.

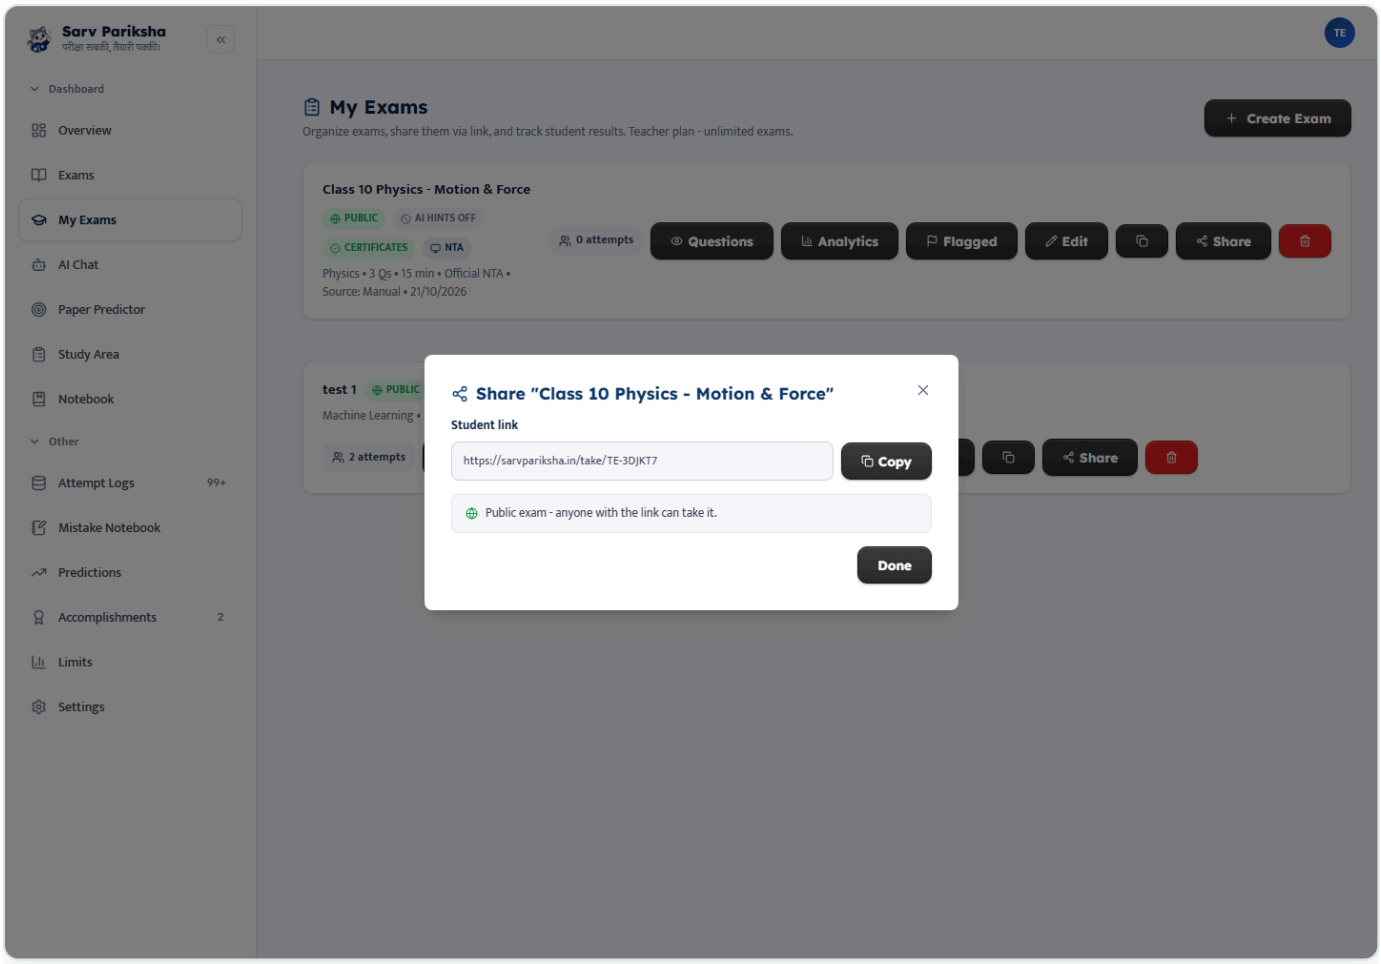

FIGURE 05 The share dialog. Public exams use the link; private exams also require the access code. The exam ID is unique and the link stays stable across edits.

Before you send it

- [ ] Open the link in an incognito window.
- [ ] Confirm the title, subject and instructions.
- [ ] Check the timer, marks and paper count.
- [ ] Submit one dummy attempt, then inspect analytics.
- [ ] Delete the dummy exam or attempts when finished.

LIVE TEST FINDING

Guests can read, but they cannot start. The Start button asks for a free account. Tell students to sign in with Google or email before the exam. Certificate downloads are account-gated in this build: test one student's Download Certificate button before you promise them.

Private exam? Send the link and the code in separate messages, and avoid posting the code in a public class group.

WHAT STUDENTS SHOULD EXPECT

Name, email, roll number, branch and section are optional except the name. The name appears on the organizer's analytics and on a certificate if one is earned.

06 · STUDENT VIEW

What the student sees.

The student path is deliberately short: identify, read the instructions, accept the declaration, then enter the paper. The engine and the timer do the rest.

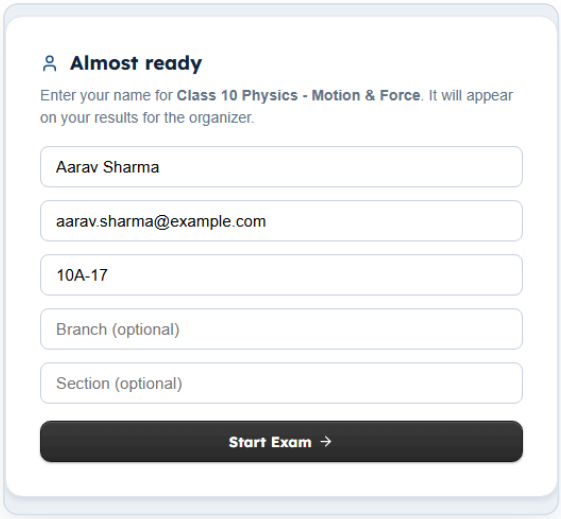

FIGURE 06 "Almost ready": the student identity form. The name is required; the rest helps you filter results.

The four-step flow

1. **Open the link.**
   Guests can read the paper and instructions.
2. **Sign in.**
   A free account unlocks Start and certificates.
3. **Enter identity.**
   Name, roll, branch and section travel into analytics.
4. **Accept and start.**
   The declaration unlocks the timed paper.

This walkthrough uses the Official NTA portal. Students saw the hall-style instructions, a declaration, then the question palette and timer. The next two pages show the other three rooms: Our Engine, Game Mode and Buzz Mode.

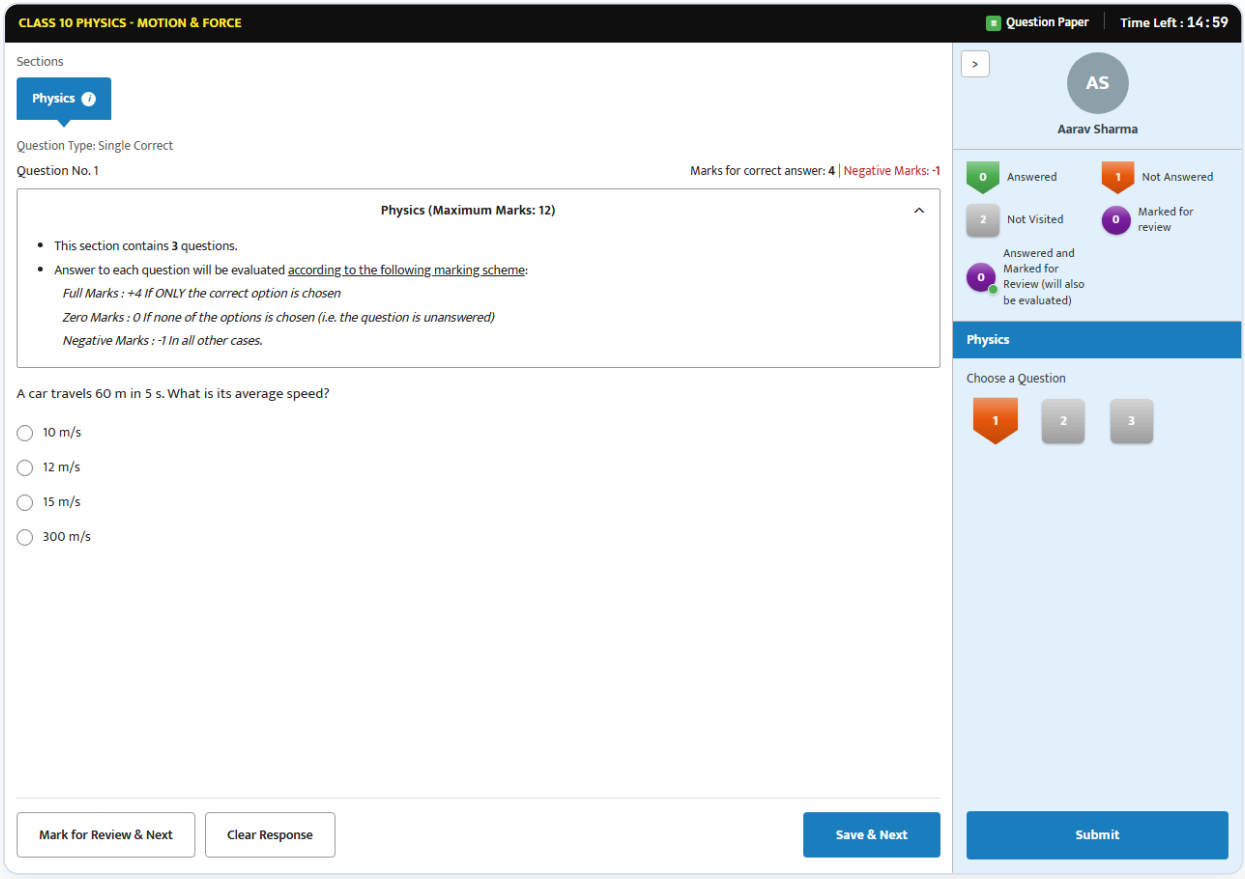

FIGURE 07 The Official NTA paper in the live test: timer, marking scheme, options, palette and Submit. The student name here is a test identity.

The engine is desktop-first. For a full NTA-style paper, ask students to use a laptop or desktop; phones are better suited to Our Engine, Game Mode or Buzz Mode.

07 · OTHER PORTALS

Same paper. Two more rooms.

Official NTA is the exam-hall replica. The other portals reuse the same questions, timer and server-side scoring, but change what the student sees. The screens below are from a second temporary paper with the same three questions and AI hints on.

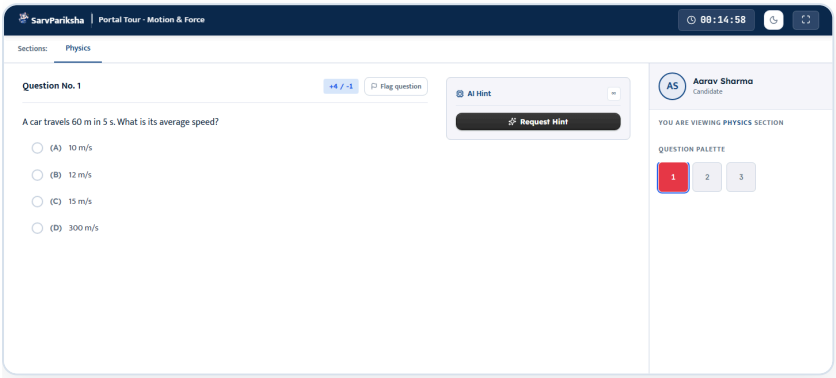

FIGURE 08 Our Engine with AI hints on: question, options and palette, plus the hint panel. This is the practice player, not the NTA command bar.

Our Engine

A self-paced paper with a friendlier player. Turn **AI Hints** on in Step 1 to expose the hint panel; leave it off for a closed-book test.

- **Student sees:** timer, question, options, a persistent palette and optional hints.
- **Student path:** link → identity → Start → declaration → paper → Submit.
- **Use it for:** revision, homework, retests and any paper where a hint is a teaching move.
- **Trade-off:** it is not the exam-hall replica. Use Official NTA when fidelity is the point.

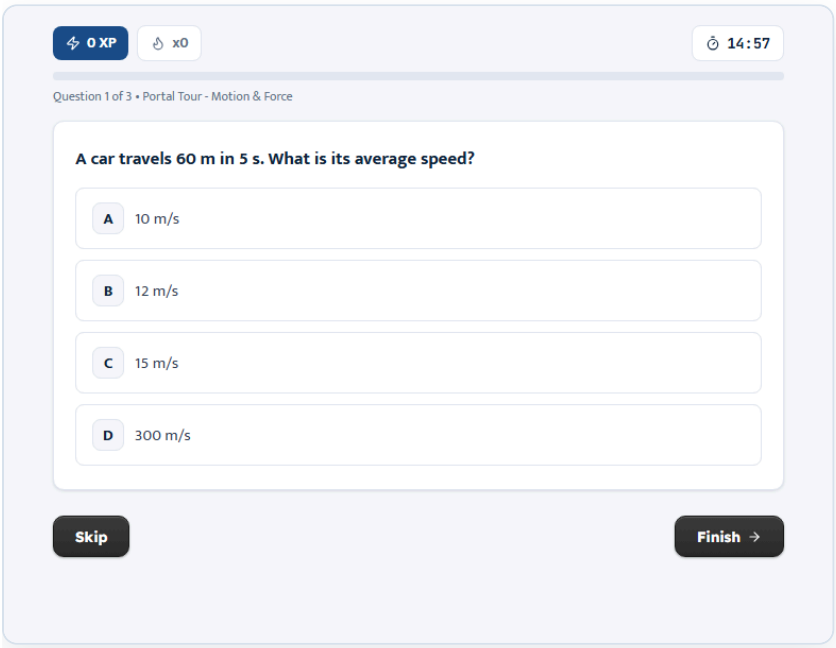

FIGURE 09 Game Mode: one question at a time, a run timer, XP and a streak counter. The same paper, without the palette.

Game Mode

An arcade run. Students answer one question at a time; speed adds XP, consecutive correct answers build a streak, and a wrong answer resets it.

One question · XP + speed · Streaks · Instant feedback

- **Student path:** link → Play Game Mode → one question at a time → Game Over.
- **Use it for:** starters, quick practice and low-stakes energy.
- **Trade-off:** no question palette; students cannot jump around or flag a question.
- **Still graded:** the game score is saved as a normal attempt when the run ends.

> WHERE THE CHOICE LIVES
>
> The portal is a **Step 1** setting. Switching it keeps the questions, marking and share link. Official NTA is on page 8; **Buzz Mode** has its own page next.

The portal-tour paper was separate from the three-student live test. Its attempts were deleted with it, so the results and analytics on pages 11–13 still describe only the Official NTA run.

08 · BUZZ MODE

Run the room live.

Buzz Mode is the only portal that runs in real time. It has two surfaces: the teacher's host screen and the student's phone. The teacher projects the room PIN, starts each question when the room is ready, and keeps the question on the big screen.

TEACHER VIEW

Host screen / projector

Lobby with PIN, QR and roster; then the question, timer and live answer count during the round.

STUDENT VIEW

Phone / four colour buttons

Join with a display name, answer against the countdown, then see points and the answer lock.

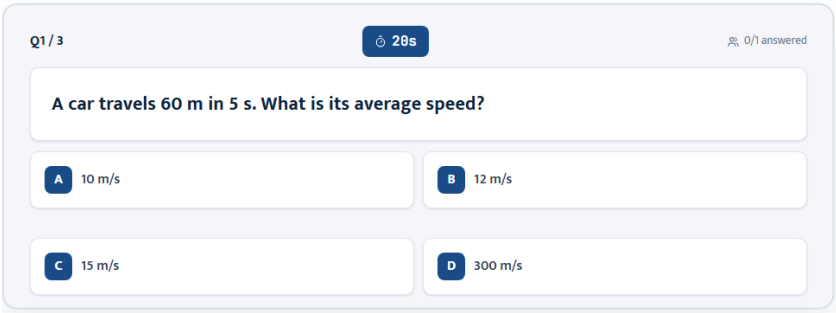

FIGURE 10 Teacher view — the host question screen: question, options, timer and live answer count. This is what the class reads on the projector.

How a live round runs

1. **Set the pace.**
   Choose Buzz Mode in Step 1; set time per question and the podium wait.
2. **Open Host.**
   On the exam card, choose the **Host** action. The host screen needs the organizer's account.
3. **Share the room.**
   Project the PIN or QR. Students open the join link, confirm the PIN and add a display name.
4. **Start when ready.**
   The host screen shows the question; the phone shows four colour buttons.
5. **Finish on the podium.**
   The host screen ranks the room; the attempt still lands in Analytics.

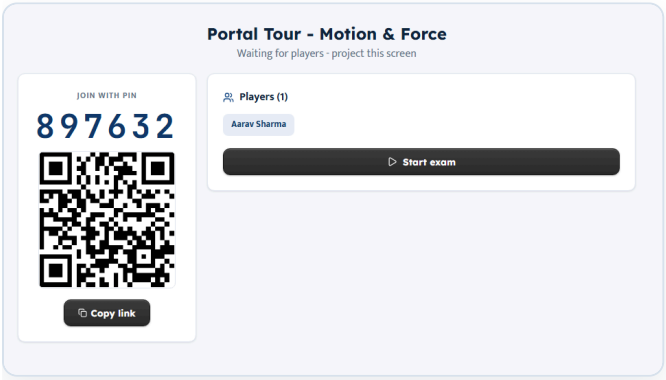

FIGURE 11 Teacher view — the host lobby before the round: PIN, QR/join link, roster and player count. The player here joined as a guest with a display name.

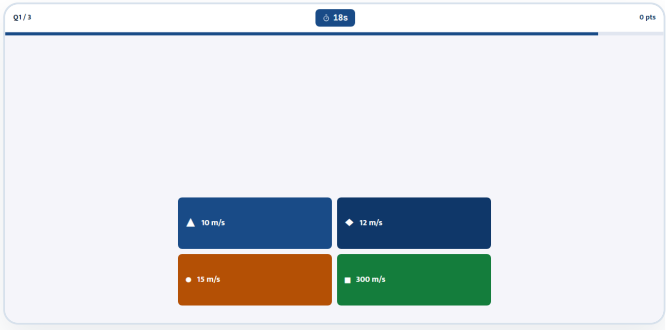

FIGURE 12 Student view — the phone during a question: four colour targets, a countdown and current points. The question text is deliberately on the host screen only.

Before you go live

- [ ] Host screen open and mirrored to the projector.
- [ ] PIN/QR visible; join link tested on a phone.
- [ ] Time per question and podium wait match the lesson.
- [ ] Certificate path tested with a signed-in student.

LIVE-ROOM FINDING

In this test, a guest joined Buzz with a display name and no sign-in. Treat Buzz as the low-friction option, but still test certificate access with a signed-in student before promising it. The host tab itself requires the organizer's account.

09 · LIVE TEST

Three attempts, three different stories.

We submitted the same three-question paper as three students. The server scored every attempt, wrote a result page and sent the rows back to My Exams. No manual marking.

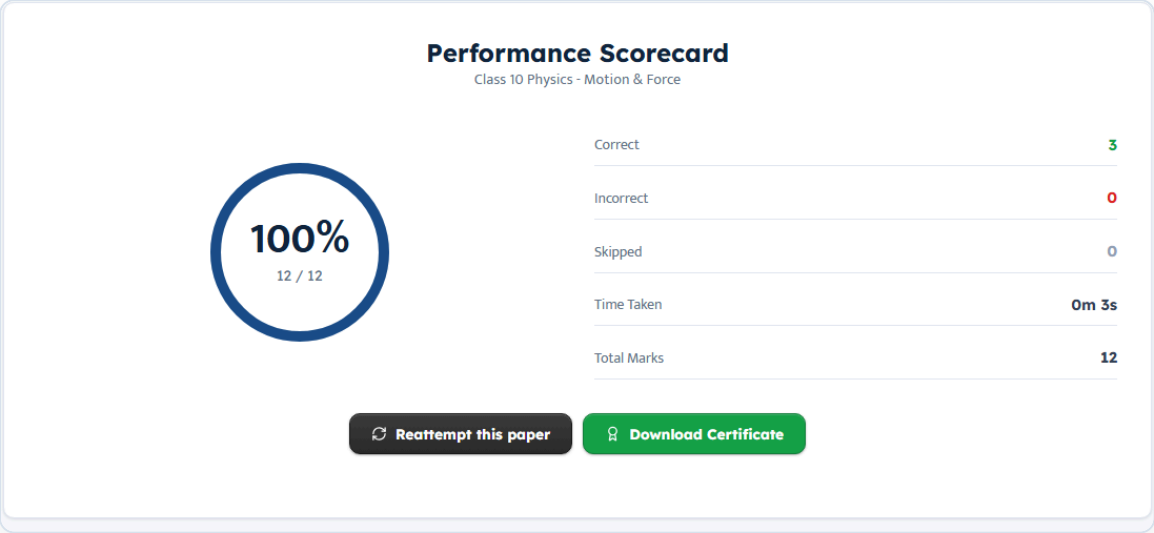

FIGURE 13 The student scorecard after submission: 100%, 12/12, with Reattempt and Download Certificate actions. The test account had certificate access; verify a real student account before promising certificates.

STUDENT	ROLL	CORRECT / WRONG / SKIPPED	SCORE	PERCENTAGE	TIME
Aarav Sharma	10A-17	3 / 0 / 0	12 / 12	**100%**	0m 3s
Diya Patel	10A-04	2 / 1 / 0	7 / 12	**58.3%**	0m 2s
Kabir Singh	10A-22	1 / 2 / 0	2 / 12	**16.7%**	0m 2s

What the scores say

- **Class average: 58.3%.** The median is also 58.3%.
- **Pass rate: 67%** at the certificate threshold of 40%.
- **Highest: 100%; lowest: 16.7%.**
- **Accuracy: 67%** across all three attempts.

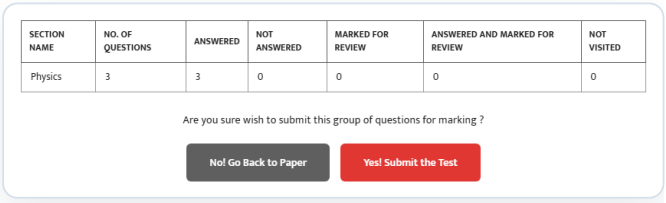

FIGURE 14 The submission summary. Students see answered / unanswered counts before the final confirmation.

The 2–3 second times are an artefact of the automated live test. In a real class, time taken becomes a useful signal; do not read it as student speed from this run. The temporary exam and its attempts were deleted after capture.

10 · ANALYSE · CLASS

The average is not the whole story.

Open **Analytics** on the exam card. The Students tab shows the distribution before the table: how many students are in each band, then every attempt with score, percentage, correctness, time and actions.

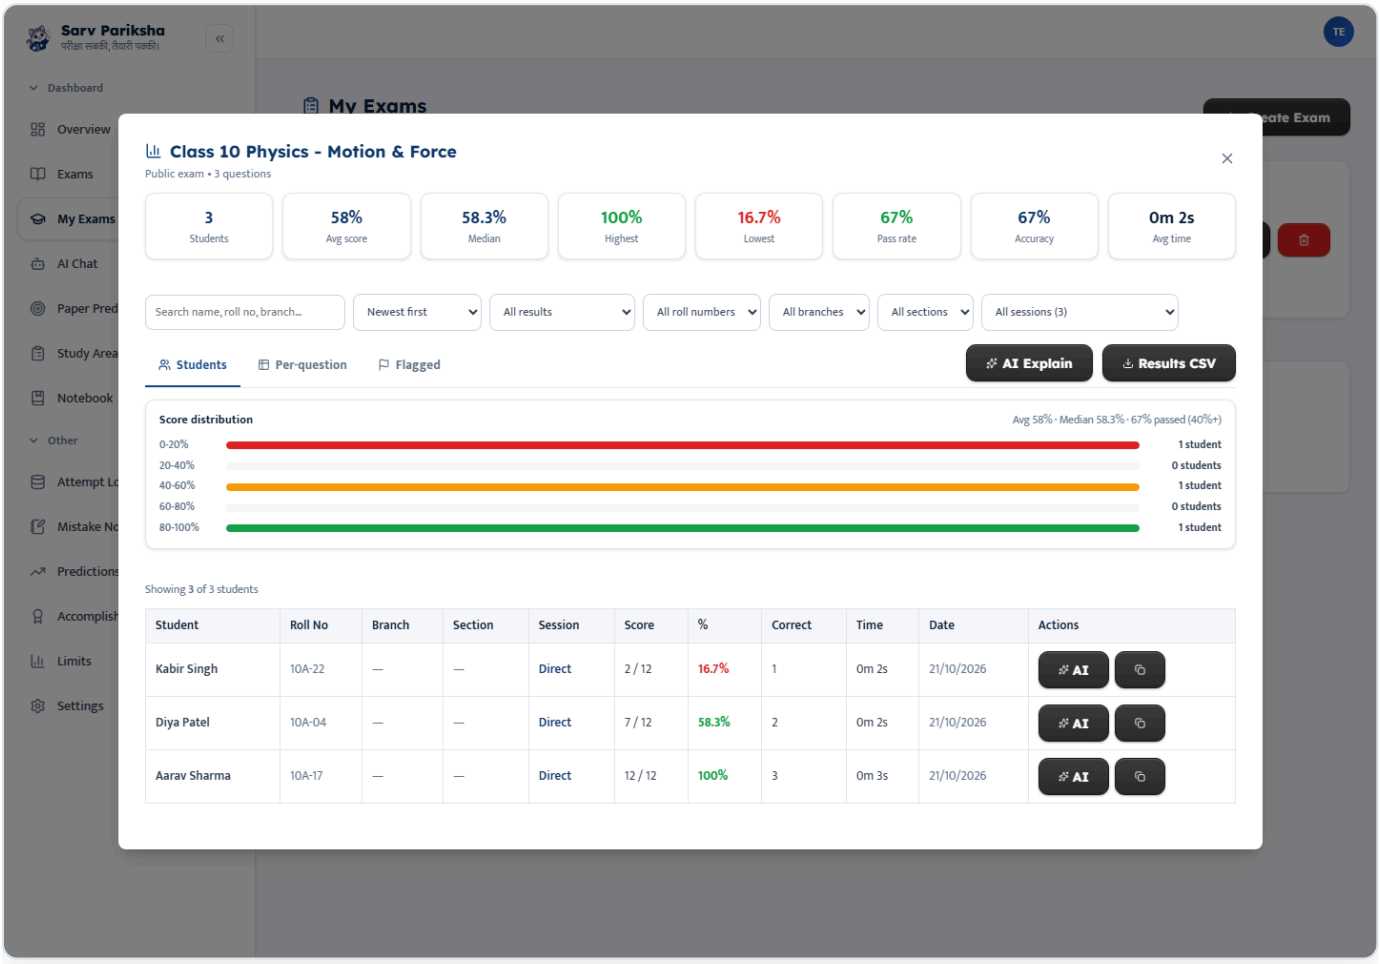

FIGURE 15 The Students tab after three live attempts: distribution, pass rate, accuracy and the full result table with AI Explain and export actions.

What to look at first

- **Distribution, not average.** One 100% and one 16.7% can hide a split class.
- **Pass rate** uses the 40% certificate threshold.
- **Accuracy** shows correct answers across all attempts.
- **Names and rolls** make follow-up possible.

EXPORTS

Results CSV is the marks sheet. **Analysis CSV** adds question-level detail. Use **AI Explain** on a student row to turn the numbers into a short diagnosis you can act on.

SMALL-CLASS HONESTY

With three attempts, a single wrong answer moves the class average by several points. Read the distribution as a conversation starter, not a verdict.

11 · ANALYSE · QUESTIONS

Find the question that broke the class.

The **Per-question** tab turns the paper into a teaching map: every question's correct rate, the students who attempted it, and the topic tag you assigned in the builder.

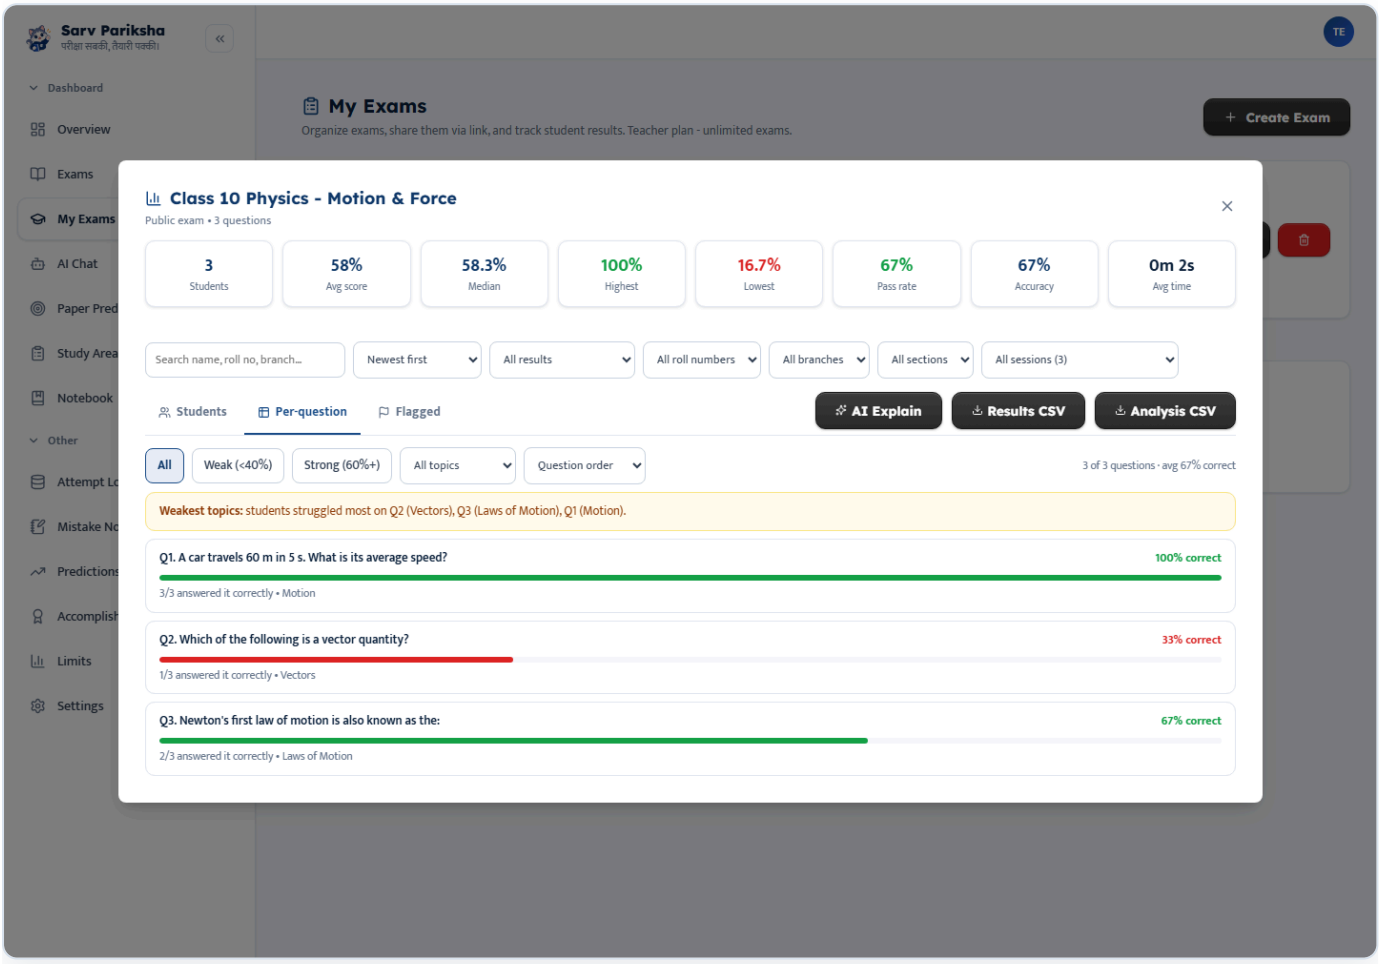

FIGURE 16 The Per-question tab: 100% on Q1, 33% on Q2 and 67% on Q3. The amber banner names the weakest topics automatically.

The reteach plan

1. **10 minutes: scalars vs vectors.**
   Q2 was the weak point — only 1 of 3 students identified Displacement as the vector.
2. **5 minutes: Newton's first law.**
   Q3 split the class; revisit inertia and the "law of inertia" label.
3. **Exit ticket.**
   Give two fresh items — one vector identification, one inertia example — and compare the new distribution.

READ THE TAGS

The weakest-topic banner is only as good as your topic labels. Q2 was tagged **Vectors**; that is why the reteach plan points there.

WHAT WORKED

Q1 (average speed) was answered correctly by all three students. Keep it as a quick confidence warm-up, not a reteach target.

Filters on this tab include All / Weak / Strong, topics, and sorting by question order, hardest first, easiest first or most attempted. Use them before a revision class to choose the next five questions.

12 · OPERATE

Keep it clean after the test.

Card actions

ACTION	WHAT IT DOES
Questions	Preview the paper exactly as stored.
Analytics	Students, per-question and flagged reports.
Flagged	Student-reported broken or unclear questions.
Host	Live lobby for Buzz Mode exams only.
Edit	Fix the paper; the share link stays stable.
Duplicate	Make a fresh copy for a test run.
Share	Copy the link and see the visibility rule.
Delete	Remove the exam and all its attempts.

INTEGRITY BY DEFAULT

Scores are recomputed on the server, submitted time is clamped to the paper, and private codes are rate-limited with a lockout. The share link is the front door, not the security model.

Quick troubleshooting

SYMPTOM	FIX
My Exams is missing	Account is not teacher/affiliate; request access.
Student cannot start	Ask them to sign in free; guests can only read.
“Not open yet” / “Closed”	Check the availability window.
Wrong score	Check the correct radio and marking; the server recomputes.
No certificate	Needs 40%+, certificates on, a signed-in account and certificate access.
Cannot reattempt	Set Reattempts to Allowed; use the same identity.
Private link asks for code	Send the code separately; codes are rate-limited.
OCR missed a question	Use a clearer image; review drafts; add syllabus topics.

Your pre-class checklist

- [ ] Teacher account can see My Exams.
- [ ] Timer and marking match the paper.
- [ ] Visibility and availability are intentional.
- [ ] Link opens in incognito and shows the paper.
- [ ] Students know they need a free account.
- [ ] Title, subject and instructions are student-ready.
- [ ] Every correct option is checked.
- [ ] Hints, certificates and reattempts are set.
- [ ] One dummy attempt reached analytics.
- [ ] Test copy or test attempts are cleaned up.

NEED HELP?

Write to **contact@sarvpariksha.in** with the exam title, the student’s roll number and a screenshot of the screen. Do not send private access codes in a public group.

SarvPariksha · My Exams teacher guide · Live test edition · October 2026. Screenshots from the live app; test data removed after capture.
