3. Accomplishments — verifiable certificates

Score $\geq 40\%$ on an **AI-generated exam** and a certificate unlocks: serial ID (SARV-XXXX-XXXX), QR code, downloadable PDF. Anyone can verify it at **sarvpariksha.in/verify**. Certificates are intentionally limited to AI exams — they prove performance on questions no one has seen before.

Configure exactly the challenge you want

Use **Topic Based** when you know your weak area — e.g. "Rotational Motion, hard, 10 questions" is a 5-minute targeted drill. Or pick the new **Adaptive** difficulty: the paper starts easy and gets progressively harder as you advance, just like a real exam ladder.

5. Custom Mock Builder — compile your own paper

Inside **Exams** → **Standard Mock Library**, open **Custom Mock Builder**: pick a subject, a year (or mix all years) and how many questions you want. It shuffles a fresh paper from the previous-year bank — every compile is a new mock, so you can build unlimited variants of the same syllabus without repeating questions.

Custom Mock Builder — subject, year and count filters

6. Game Mode — the adaptive arcade

Exams → **Game Mode** is not an exam — it's a quiz arcade that opens in its own distraction-free window: no site header, no navigation, nothing to click around. Difficulty adapts live to your performance: answer correctly and quickly and questions get harder; slip up and they ease off.

- **Pick your battlefield** — choose a subject, type any topics (comma-separated), or upload a photo of your syllabus and AI extracts the topics for you automatically.
- **Count Mode** — a fixed number of questions, then the game ends on its own.
- **Focus Mode** — infinite questions until you press **End Game**. Perfect for deep practice sessions.

Game Mode setup — Daily Challenge card, global leaderboard and game configuration

Daily Challenge & the global leaderboard

Once a day there's a **Daily Challenge**: 10 mixed questions, the same for every player that day, played for the global leaderboard. Score high and fast to climb — medals mark the top 3, and everyone sees where they stand. One attempt per day counts, so make it count.

7. Mistake Notebook — where wrongs go to get right

Every question you answer wrong or skip is collected automatically into the **Mistake Notebook** (Dashboard → Mistake Notebook). Nothing to set up — attempt any exam and your misses land here, tagged by topic and how many times you've missed them.

- **Re-practice queue with spaced repetition** — work through your mistakes one by one. Answer one correctly and it leaves the queue... but it returns if you miss it again in a future exam. Mistakes can't hide.
- **AI Study Plan** — one tap turns your weak topics into a 7-day revision plan: what to study each day, when to mix in a mock, and what to keep revising.
- **Mastered list** — questions you've fixed in re-practice get a green tick; reset anytime.

N

Mistake Notebook — due mistakes, weak-topic chips, AI study plan and the re-practice queue

8. Smarter results — analysis beyond the score

Submitting an exam now gives you far more than a scorecard (sign-in required for the analysis extras):

- **AI Performance Analysis** — a coach-style verdict: why you lost marks, a time-management note, and this week's revision plan, generated from your actual answers.
- **Explain with AI** — tap any question in the solutions for a deep step-by-step explanation, including exactly where your picked option went wrong.
- **Time-per-question heatmap** — every question shows how long you spent on it (green = fast, red = slow), so you can see exactly which questions ate your clock.
- **Estimated percentile** — an indicative percentile based on typical competitive-exam score curves.
- **Shareable result card** — a clean image summary of your attempt (score, percentile, exam) ready for WhatsApp/Instagram.

abhay557

9. Streaks & badges

Practice daily to build your **streak** — shown right on the dashboard overview — and unlock badges along the way: First Steps (first attempt), Consistent (3-day streak), Dedicated (7 days), Unstoppable (30 days) and Century (100 practice days). Streaks count any attempt or game run; missing a day resets the counter, so consistency is the game.

Best Performance Notice:

This prediction engine is optimized for college sessional papers, midterms, CAE unit tests, and university terminal exams. It is not intended for massive nationwide multi-session exams like JEE Mains or NEET.

AI Paper Predictor

Upload syllabus rules, attach previous question papers, and generate high-probability exam questions.

1 Syllabus & Layout Rules

Paste course syllabus, topics list, or write exam layout rules.

e.g. Unit 1: Data Visualization (Bar Chart, Line Chart). Exam specs: 50 marks, 10 questions...

Tip:

You can specify custom exam layout rules (e.g. "30 marks, 6 questions, 2 units") directly in the text box above.

Attach Syllabus PDF/TXT

2 Previous Year Question Papers (Optional)

Upload images or PDF scans of past question papers. Neural OCR extracts past formatting and question difficulty.

Drop Past Exam Papers Here

Supports PNG, JPG, JPEG, and PDF format files

Run Analysis & Predict Questions

Prediction Pipeline

1 Provide Syllabus or upload past exam papers.

2 Neural OCR extracts formatting & unit weightage.

3 Generates customized subjective forecast paper.

Paper Predictor — upload past papers, get a forecast

11. Taking a teacher's exam

When a teacher/organizer shares a link (`sarvpariksha.in/take/TE-XXXXXX`), open it, enter the access code if asked, type your name, and the exam opens in the same CBT engine. Your score goes straight to the organizer, and you receive a **shareable verified-result link** you can attach anywhere — it shows your server-verified score and can't be edited.

Heads-up: the organizer controls AI hints per exam. If they turned hints off, the hint panel is completely hidden for that exam — don't look for it, it's intentional.
